

Find coverage wherever it's hiding with CoverMe Coverage Discovery

The Affordable Care Act increased access to health insurance, but that doesn't mean everyone can afford to pay for health insurance coverage. Many times, the cost of the health insurance plans are unaffordable or have such high deductibles, the plans don't cover anything. Sometimes patients arrive without knowledge of their existing health insurance coverage, perhaps due to a change in employment or a student who is unaware that they are still covered under their parents' plan.

CoverMe Coverage Discovery can help by using the patient's information to search the top health insurance companies for active coverage in the medical provider's market. The **CoverMe Coverage Discovery** program takes only seconds to return results from private payers, Medicare and Medicaid, leading to increased cash collections and decreases in charity and bad debt.

Seek with CoverMe and you shall find.

CoverMe software filters patient data and pinpoints unidentified coverage in real-time. Save time by identifying health insurance coverage before services are provided to your patients, and help claims flow properly to your business office by finding billing information up front.

AI-Driven Technology

Assess patient coverage benefits on every single account to find additional payment opportunities for complex cases, including Medicaid.

Automated Processes

Streamline your process and improve staff efficiencies with comprehensive, easy-to-interpret information.

Proactive Identification

Harness proprietary data sources, historical information, and demographic validation to identify previously unknown coverage.

Maximized Revenue

Scan for consistent insurance coverage to maximize reimbursements and decrease accounts sent to collections and charity.

Solutions to fit any insurance discovery need

- ✓ Give patients peace of mind and prevent financial hardships
- ✓ Convert potentially uncompensated care into insurance payments
- ✓ Optimize reimbursements with accurate, ready-to-use data
