Get on the HPE fast track with CoverMe's automated solution

Identify patients who will qualify for Medicaid in real-time through the **Hospital Presumptive Eligibility (HPE)** program. **CoverMe** automates and speeds up the application process to find Medicaid coverage immediately and get hospitals reimbursed for care faster. Replace the tedious and time-consuming manual Medicaid vendor processes with a software that analyzes, scores, and presents eligibility data before patients even leave the facility.

What is HPE?

As allowed by the Affordable Care Act, Medicaid eligibility under the HPE program affords immediate access to coverage for eligible individuals. HPE provides another channel to apply for Medicaid coverage in real time and guarantees the hospital will be reimbursed for services provided, just as if the individual was enrolled in traditional Medicaid at the time of treatment.

Take the guesswork out of HPE with CoverMe:

- ✓ Completed applications delivered to your desktop in seconds

- ✓ Providers are guaranteed to meet state program compliance requirements

- ✓ Immediate, temporary Medicaid enrollment for eligible patients and families

- ✓ Appropriate and timely reimbursements for healthcare services

Automation
Save time & money with intelligent application processing.

Accuracy
CoverMe analyzes the data and gives you an accurate eligibility score to make real-time Medicaid determinations.

Access
Give your patients a new channel to apply for coverage and improve access to Medicaid.

Are you looking for the fastest and most reliable path to determine your patients' Medicaid eligibility? Let CoverMe's HPE software show you the way.
